

**Dawid Wozniak:**

OK, so let's start. It is the last iteration, so it should be fast, and I will show you the product as you noticed and as we talk before the meeting, there is this problem that we display all new 5000 latest comics, but it is still acceptable. It is just the problem with the scalability, I guess. So yeah, we need to wait until it loads and then I will talk about the changes so what has changed since the last time we look at it. Then I have a few general question to you. So, there are not that much changes if we go to the commits and you search for something now you can also search in the description. So, let's say put „add” here and then I'm not satisfied with the results. So, I can also tick this box and then I have also some commits that don't need have this word directly in the message, but it's somewhere in the description. So, if I open here, we actually see that it is in the description and then another change is that when I show these edited files then I will also get the list of the files that has changed here. So, you don't need to look through this repository. You can have the list here. Yep. So, they are only two changes like major changes that I wanted to show you. And now I would like to ask you - has it improved since the first version and it's a scale question from zero like it's has not improved at all to ten that it is a fundamental change.

**Paulina:**

Yeah, I think that improved. I see you added some functionality and now it's better I think that it is like nice product. Still, I believe that you can add some UI tweaks or improvements. So, then you basically have like better accessibility and other stuff, so it's better to use for people, yeah.

**Dawid Wozniak:**

And if you needed to give a grade, what it would be?

**Paulina:**

Six, let's say I think that's OK.

**Dawid Wozniak:**

Okay and now I'm going to repeat the question from the first iteration. So, I asked you then information about commit messages is presented in the clear and easy to navigate UI in GitTrack. And do you agree with this statement? So, it's like 0 do not agree completely the UI is very very bad and to ten, that's perfect, nothing to correct.

**Paulina:**

Yeah. So, I don't remember what I said the last time, but they are still see room for improvement so I will give it like five. So, it's OK, but it's not super useful.

**Dawid Wozniak:**

Okay and now I have another question, on this scale, so it is the last question on this method. So how much would it be beneficial to use Git track in your work or any side project on scale of zero to ten and why?

**Paulina:**

So as I said to you sometime ago, it's probably not tool for me. I think that's more for developers, but yeah, I see some usage of it. So, it's difficult actually to give a grade to you. I think... also five would be fine. So, it's like useful I guess for some people, but it's not for everyone. And yeah, I believe that it's a good grade.

**Dawid Wozniak:**

Okay. So, if you said that, I think that there are some usages of this for you, but it's still something missing. What do you think is still missing regarding the commit history?

**Paulina:**

Yeah. So, we talk about it, and I think that UI should be improved. So, you know when you have the sorting and the filters, and I don't want to see that when I actually set something, then I just wanted it to be gone, but now it's actually not. So that's the one thing and not all my commits were taken into account for this analysis that's also wrong. I think that they're still accessibility issues.

**Dawid Wozniak:**

Okay. That's nice feedback. Do you have anything else to say about this product? So, it's a time to say it. If you have anything on your mind.

**Paulina:**

No, no, I don't think so. I think that you did a good job here and it looks better. It is just that you should maybe think about some UI or some other things after you finish with your project, then you have some time to solve these small issues, but overall it is a good improvement.

**Dawid Wozniak:**

Okay, so thank you one more time for helping me. It was really a pleasure to talk with you and you help me with my master thesis a lot. So, I think you one more time and I will stop the transcription right now so thank you.
