

Dawid Wozniak:

OK, so let's start. I preloaded the repository that you gave me and now I'm showing you the improvement that I have. Then, some general questions as it is fourth iteration. So, I think that it should be not that long. So, there are a few improvements, so that one is that now when you click here, and you go to the commits tab and then you put some search. You can also search in a description, so if I put here like, let's say „version” and then I tick search in the description we can see that there are some commits that do not include this in the commit message. Then I open it and I have still this show edited files and description here is quite long so I need to scroll and then I click here, and it's analysing, and we will get the list of the files here.

Michał:

OK, but why is not the formatting supported in here? Why is it looking like like this?

Dawid Wozniak:

Yeah. So, we don't support the formatting. It is because it is marked down and with also don't load images and links. It's kind of security thing, but the markdown can be supported. It's just a matter of time that we didn't do this.

Michał:

Yeah, that will be good if you can add that.

Dawid Wozniak:

Okay, thank you for this suggestion. That's nice. You can also see that there is a loading screen, so this track animation when you are doing some fetching. But now I have general question - has it improved since the first version? What is the improvement on the scale from zero to ten?

Michał:

Yeah, I think that it improved. I think that's in general much nicer than it used to be. It is just in general. I would say that it's like seven.

Dawid Wozniak:

Yeah. Yeah, it's a good grade. Thank you for that. And then I have another question that I also ask you. During the first iteration, so you think about the sentence, that information about the commits is presented in the clear and easy to navigate UI in GitTrack. Do you agree with it? And we have this scale from zero that is like completely I not agree with it. It is very, very bad. And then to ten that it's actually good.

Michał:

Yeah, I think that here for the UI part, I will maybe give it like seven. Saying that it's improved that I'm pleased with it. It's definitely better in the navigation along the commit. The commit description maybe should be supported.

Dawid Wozniak:

OK. And how much would it be beneficial to GitTrack in your work for any purpose on the scale of zero to ten and zero is like you would never use it to ten that you would use it multiple times a day?

Michał:

Yes. So, for me, it's not the tool that I will use it that much frequently, but I think that the in general, yeah, I see some usage of it. So, I guess that I can give it like six. I think that it's useful but maybe not on the daily basis.

Dawid Wozniak:

Okay. So, there is some usage that, you'll use this product for and what is still missing regarding commit message history?

Michał:

I don't think that there is some major thing missing. Uh, maybe some accessibility issues. I think that Paulina was also talking about that so I just agree with her.

Dawid Wozniak:

Is there anything else that you would like to say about the product?

Michał:

No, no, that's fine.

Dawid Wozniak:

So thank you one more time for helping me and I will stop the transcription right now.
