Dawid Wozniak:

OK, so let's start. And today I prepare the presentation with your repository that you send me and here we have some information. So, it is the second iteration and there was a first iteration. It was like the introduction. Now, I focused on the UI on the second iteration. I will focus more on the functionality then would before the fourth iteration and it will be like bug fixing for this third and comparison between the version with and without commit, so it will be really important for my master thesis I'm actually checking, if this improved everything to this old version. And now I'm going to present you this tool if you would like to use it on your local machine, you can. There is this comment *npx -y git-truck-beta@latest* so I will send it also to you and then you can use it if you want to. But yeah, and now you can see your product so it's this *robolet* repository and then let's see the changes. So now, if I go to this bubble, there is a completely different view. So, you have this data, and you still have the view here, but then you have also some things and I forgot to mention, but it's actually important that we still have this problem with the scalability. So, because of that, you just have 5000 commits, latest comments taken into this analysis. Then you can search for some commits so you can add some keyword here and then you can do some author filtering, dates and show merge commits or hiding them. So, here actually when you don't know the author, you need to go to this top contributor metrics and just put let's say… some people like here we have Andrea so you can put Andrea and then you see only comments from Andrea. So. it's not like super smart now and you have dates. So, you can set it to something you want so here if I search for „add", Ohh I see it's case sensitive. It should not be so I just put lower case now and you can see OK now you can see all these commits. I see that you are using some commit conversion so you can see everything what was added here. Yeah, and then you have some „test" and some other what we can see on the screen. So, I have a few questions about that. So, the first question is, is this view better than in used to be? Um, so it is not in the general tab instead of the tab.

Michał:

Yeah. So basically, I think that, uh, it's better. It looks nicer. Yeah, it's just, you know, better in navigation, I think so you can actually do something with this list, so that's nice.

Dawid Wozniak:

OK, um to when you think about this filtering and everything what we have on the screen thing that it's useful for you. Do you need something more?

Michał:

Yeah. So, I think that it's nice that we have that and it's actually important that you can set filter for some part of the message, because you know we have this convention that we are, we have this feature column and some text, so that's good. So, then it's really important. I think that for authors, you can also make it like more friendly visually. You can make some list, or you can make like the tags that you click and then you can go through it. Can you show me the dates again?

Dawid Wozniak:

Yeah, sure.

Michał:

Yeah, so that looks nice because I thought that you also need to like put it manually, but you have calendar, so that's even better. Maybe you should use like the slider or think about the the UI like what should be there and what should not so make it like more flexible, nicer.

Dawid Wozniak:

Okay and now when you think about this, commit messages that we have with some filtering and we

also have the commit description. So, if you have a pull request, you can put something here by default. I think that they are commit messages. So, if you have that, would it be beneficial to create like a tag cloud? And here I have an example of the tag cloud. So, you think that it's nice or not.

Michał:
Yeah, I don't think that I will use it. Maybe it's nice if you want to just look it for fun, but it's not that profitable. I cannot imagine the situation when actually it would be interesting for me. So sorry about that.

Dawid Wozniak:
Uh, yeah, yeah, there is nothing to be sorry about. It's your honest opinion. So that's nice. Thank you for sharing with this. It's really important also to share things that might not be that negative. Now, I think there is time for another question. So, when you have this commit messages here, do you think that there is some insight, some more insights that you can get out of it?

Michał:
Let me think. So, as I said the last time, I think it will be really, really nice, if I could see the changes when they apply and because now I can see that there was like adding this version, but what was actually changed, I cannot see that and I can not click this, right? I cannot right click and go to the GitHub to see this comparison between changes. So yeah, I think that it would be really nice if I can get it here. What else? Sorry. Actually, I cannot think about something else. What you can get now. Maybe there is something but I'm just not that super smart to think about it now.

Dawid Wozniak:
Yeah, OK, that's fine. That's uh, super nice. And that you are actually set this one more time. So, I will think about how to make it this connection between those commits and the visualisation or how to connect it to GitHub. That would be nice but maybe there is something else that you would like to say about the product. I know that's your baby is waiting for you. So, if you have nothing to say, that's also fine. It is just the time for you. If you want to use it and then you can say something, or if not, that's also okay.

Michał:
Yeah. So, uh, actually, I think that that is no like any title of this product that is GitTruck. I see that it is on the like on the top of your tab but here it's not visually like showing me that it's GitTruck somewhere, so maybe you should think about that like add a logo if you have a logo or just put the GitTruck somewhere on the top.

Dawid Wozniak:
Yeah. So actually, we have this, but if you click here we have like see more repositories and then we will go back to this view and we have like GitTruck beta and then we have the footer here. So, we have some indication which version it is and that it is GitTrack, but yeah, maybe actually we should think about the branding. So yeah, what should be the icon so, it's very valuable that you should share that with me. Um, do you have anything else to share?

Michał:
No, no, I don't think so. But I think that it would be nice if you had this even the title somewhere like as a box on the left side maybe, and that is also OK. Around the top of the visualisation there is like the empty space, and you have also empty space between left side and right side. So, you can, I don't know, make this visualisation bigger or make like a table with the commits that you can actually put on one of the sites and reorganise the UI. Yeah, it's just, you know to do not waste the space.

Dawid Wozniak:

Okay. That's very nice feedback. So, thank you one more time for your time. I know that it's actually important for you and you that you spent time with your family, and you spent also some minutes with me. So yeah, thank you. One more time for this and see you. Hopefully next time for the for the interview. So, thank you and see you.
